

MAINTENANCE

- Read the following maintenance instructions carefully. For further information, please contact: 076 60 40 15.
- Plastic chairs and tables can be cleaned easily using water, uncolored liquid detergents and non-abrasive detergents. Allow the soapy water to remain on the furniture for few minutes and if necessary clean the surface with a flexible brush, then rinse with water.
- Avoid prolonged contact of the furniture with colored and fatty substances (sunscreen) ; the polymers could absorb them and cause stains on the surface. For a safe cleaning, we recommend to use water with uncolored and non- abrasive liquid detergents. Allow the soapy water to remain on the furniture for few minutes and if necessary clean the surface with a flexible brush , then rinse thoroughly with water.
- Do not use abrasive or glass cleaning detergents.
- In case of small rust stains or scratches on metal parts, due to the lack in the maintenance, polish the damaged areas lightly, then apply an antioxidant primer and finish with a shine varnish.
- Products made of synthetic fiber and textilene keep their original conditions by treating them twice a year just to brush off dirt and environmental pollution.
- If pressure water is used , be careful not to damaged the surface . We recommend to clean the item with a synthetic sponge and do not replace it until it is completely dry.
